Project Genesis Blueprint

The Workflow Discovery

This blueprint captures the proven workflow for transforming a voice note into a fully researched, expert-driven deliverable. The process was validated through the creation of an award-winning graduate program for the Middle East.

Phase 1: Voice Note Intake

The journey begins with a voice note. A stakeholder records their vision, requirements, and context in a 2-5 minute voice message. This captures nuance, emotion, and implicit requirements that text often misses.

What happens:

The voice note is transcribed using speech-to-text technology. The transcription is then analyzed to extract key information that pre-populates the Project Genesis wizard questions.

Pre-population targets:

Wizard Question	Extracted From Voice Note
What are we trying to achieve?	Primary objective statements
Who is this for?	Target audience mentions
Internal or external project?	Context clues about stakeholders
Timeline expectations	Any deadline or urgency mentions
Success criteria	Outcome descriptions
Constraints or requirements	Budget, resource, or scope mentions

Value proposition: Rather than asking the user 15 questions, the system pre-fills 10-12 based on voice analysis, requiring only confirmation or refinement.

Phase 2: Project Genesis Wizard

Once the voice note has pre-populated the intake, the wizard validates and enriches the brief through targeted questions.

Core wizard questions:

1. What is the primary objective? (pre-filled from voice)
2. Who is the target audience? (pre-filled from voice)
3. Is this internal or external facing?
4. What is the timeline? (Immediate / 1 week / 1 month / Ongoing)
5. What does success look like?
6. Are there budget or resource constraints?
7. Who needs to approve the final output?
8. What format should the deliverable take?

Output: A structured project brief that can be handed to the AI system.

Phase 3: Initial Expert Consultation

With the brief defined, the system assembles a preliminary team of AI-SME experts to conduct initial research.

How it works:

The Digital Twin (Chief of Staff) analyzes the project brief and selects 5-8 relevant experts from the 290+ available. These experts conduct parallel research on their domains.

Example for Graduate Program project:

Expert	Domain	Research Focus
Dr. Fatima Al-Mansouri	L&D (GCC)	Regional training best practices
Dr. Sarah Mitchell	L&D (Western)	Global program benchmarks
Dr. Ahmed Al-Rashid	Behavioural Psychology (GCC)	Motivation and engagement
Sheikh Khalid Al-Thaqafi	GCC Culture	Cultural considerations
Corporate: McKinsey	Strategy	Industry frameworks

Output: Initial research synthesis with key findings, gaps identified, and recommendations for deeper exploration.

Phase 4: Project Lead Assignment

Every project needs a single point of accountability. The system assigns a Project Lead based on the project type.

Assignment logic:

Project Type	Recommended Lead
Learning & Development	L&D Expert (GCC or Western based on context)
Investment Analysis	Warren Buffett persona
Marketing Campaign	Brand Strategy Expert
Legal/Compliance	Legal Expert
Technology Build	Tech Expert
Cross-cultural Initiative	Culture Expert

The Project Lead becomes the primary interface for the user, coordinating the expert team and synthesizing outputs.

Phase 5: Expert Team Assembly (12-Person Team)

For significant projects, a full 12-person expert team is assembled. This team provides diverse perspectives essential for comprehensive deliverables.

The 12-Person Team Structure:

Role	Purpose	Example for Graduate Program
1. Project Lead	Coordination and synthesis	Dr. Fatima Al-Mansouri (L&D GCC)
2. Domain Expert (GCC)	Local expertise	Sheikh Khalid Al-Thaqafi (Culture)
3. Domain Expert (Western)	Global benchmarks	Dr. James Crawford (Western Culture)
4. Target Audience Voice 1	User perspective	Noura Al-Suwaidi (GCC Gen Z Female)
5. Target Audience Voice 2	User perspective	Sultan Al-Harthi (GCC Gen Z Male)
6. Recent Graduate	Fresh perspective	Mariam Al-Blooshi (GCC Engineering Grad)
7. Behavioural Expert	Engagement design	Dr. Ahmed Al-Rashid (Behavioural GCC)
8. Storytelling Expert	Narrative and messaging	Creative Director persona
9. Visual/Design Expert	Presentation and materials	Design Expert persona
10. Strategy Consultant	Framework and structure	Corporate: McKinsey
11. Quality Reviewer	Standards and benchmarks	Industry Expert
12. Digital Twin	Coordination and user alignment	Chief of Staff

Team composition principles:

The team always includes at least one GCC perspective and one Western perspective for cross-cultural projects. Target audience voices (Gen Z, recent graduates) provide

reality checks. The Digital Twin ensures alignment with user preferences and past decisions.

Phase 6: Deep Dive Research

With the full team assembled, each expert conducts deep research in their domain.

Research outputs:

Each expert produces a focused brief covering their domain. For the graduate program example:

Expert	Deliverable
L&D Expert	Best practices for graduate programs globally
Culture Expert	GCC-specific considerations and adaptations
Gen Z Voices	What young professionals actually want
Recent Graduate	Real experience and expectations
Behavioural Expert	Engagement and retention strategies
Strategy Consultant	Program structure and KPIs

Synthesis meeting: The Project Lead synthesizes all inputs into a coherent recommendation.

Phase 7: Deliverable Creation

Based on the research synthesis, the team creates the final deliverable.

Deliverable types:

Format	When to Use
Presentation (PPT)	Stakeholder pitches, board meetings
Report (PDF)	Detailed analysis, business cases
Executive Summary	Quick decision documents
Implementation Plan	Action-oriented projects
Workshop Materials	Training or facilitation

Quality gates:

Before delivery, the output passes through:

1. **Storytelling Expert review:** Is the narrative compelling?
2. **Visual Expert review:** Is the design professional?
3. **Digital Twin review:** Does this match user preferences?
4. **Target Audience review:** Would this resonate with the intended audience?

Phase 8: User Review and Iteration

The deliverable is presented to the user for feedback.

Review interface:

The user can provide feedback through voice note, text, or direct annotation. The expert team iterates based on feedback until approval.

Approval workflow:

1. Initial draft presented
2. User provides feedback (voice or text)
3. Expert team revises
4. Second review
5. Final approval or further iteration

Implementation Recommendations

For Project Genesis wizard:

Add a “Start with Voice Note” option at the beginning of project creation. The voice note is transcribed and analyzed before presenting the wizard, with fields pre-populated based on the analysis.

For expert team assembly:

Create a “Suggest Expert Team” function that analyzes the project brief and recommends a 12-person team. The user can accept, modify, or manually select experts.

For project lead assignment:

Automatically suggest a Project Lead based on project type, with the option for user override.

For voice note integration:

The floating voice note button should have a “New Project” mode that routes directly to Project Genesis with transcription.

Technical Requirements

Voice transcription:

Use the existing Whisper API integration for transcription. Add entity extraction to identify key project parameters.

Expert selection algorithm:

Match project keywords and categories to expert specialties. Weight by performance scores and past success on similar projects.

Team coordination:

The Digital Twin (Chief of Staff) manages the expert team, ensuring all perspectives are captured and synthesized.

Progress tracking:

Show project status in Workflow with clear phase indicators (Intake → Research → Assembly → Deep Dive → Creation → Review → Complete).

Success Metrics

Metric	Target
Time from voice note to initial research	Under 30 minutes
Expert team assembly time	Under 5 minutes
First draft delivery	Within timeline specified
User satisfaction with pre-population	80%+ accuracy
Iteration cycles before approval	2 or fewer

Appendix: Expert Team Templates

Template A: Learning & Development Project

1. L&D Expert (GCC)
2. L&D Expert (Western)
3. Behavioural Psychologist
4. Culture Expert (GCC)
5. Gen Z Female (GCC)
6. Gen Z Male (GCC)
7. Recent Graduate
8. HR Expert
9. Storytelling Expert
10. Visual Designer
11. Strategy Consultant

12. Digital Twin

Template B: Investment Analysis Project

1. Warren Buffett (Value Investing)
2. Ray Dalio (Macro)
3. Cathie Wood (Growth)
4. Regional Market Expert
5. Industry Specialist
6. Risk Analyst
7. Financial Modeler
8. Legal/Compliance Expert
9. Tax Expert
10. Storytelling Expert
11. Visual Designer
12. Digital Twin

Template C: Marketing Campaign Project

1. Brand Strategy Expert
2. Consumer Psychology Expert
3. Culture Expert (GCC)
4. Culture Expert (Western)
5. Gen Z Female
6. Gen Z Male
7. Creative Director
8. Visual Designer
9. Copywriter
10. Media Strategist
11. Analytics Expert
12. Digital Twin

This blueprint captures the proven workflow for transforming stakeholder vision into expert-driven deliverables. The process ensures diverse perspectives, cultural awareness, and user alignment at every stage.
