ElevenLabs Voice Briefing Workflow

Document ID: INT-003
Version: 1.0
Date: January 15, 2026
Purpose: Standard process for creating voice briefings using ElevenLabs within CEPHO

Overview

ElevenLabs provides AI-powered voice synthesis for creating audio briefings and summaries. This document defines how ElevenLabs integrates with the CEPHO/Project Genesis workflow to deliver voice-based content.

When to Use Voice Briefings

Use Case	Trigger	Output
Daily Brief	Morning update needed	2-5 minute audio summary
Opportunity Summary	New opportunity assessed	3-5 minute overview
Decision Brief	Before key meeting	5-10 minute detailed brief
Progress Update	Milestone reached	2-3 minute status update

Workflow Process

Step 1: Prepare Script

Before generating voice, prepare a clear script:

1. Create script in `/home/ubuntu/the-brain/[PROJECT]_VOICE_SCRIPT.md`
2. Follow the standard structure:
    - Opening (context setting)
    - Key points (3-5 main items)
    - Implications (what it means)
    - Next steps (actions required)
    - Closing
3. Script guidelines:
    - Write for spoken delivery (conversational)
    - Use short sentences
    - Avoid jargon unless necessary
    - Include natural pauses (use "…" or paragraph breaks)
    - Target word count: 150 words per minute of audio

Step 2: Access ElevenLabs

1. Navigate to elevenlabs.io
2. Log in with CEPHO credentials
3. Select "Speech Synthesis" or "Text to Speech"

Step 3: Configure Voice

Select appropriate voice for context:

Context	Recommended Voice	Tone
Executive Brief	Professional male/female	Authoritative, clear
Daily Update	Neutral, friendly	Conversational
Training	Clear, measured	Instructional
Investor Summary	Confident, professional	Persuasive

Settings:

- Stability: 50-70% (balance between consistency and expression)
- Clarity: 75-90% (clear articulation)
- Style: 0-30% (subtle expression)

Step 4: Generate Audio

1. Paste prepared script
2. Preview generation
3. Adjust settings if needed
4. Generate final audio
5. Download as MP3

Step 5: Store and Distribute

1. Save to:
    - `/home/ubuntu/the-brain/offline_package/audio/`
    - Name: `[DATE]_[TYPE]_[PROJECT].mp3`
2. Distribution options:
    - Direct file share
    - Embed in The Brain platform
    - Email attachment
    - Integration with notification system

Integration with Project Genesis

Script Templates

Daily Brief Template

```
Good morning. Here's your CEPHO brief for [DATE].

[PAUSE]

Today's priorities:
First, [PRIORITY 1].
Second, [PRIORITY 2].
Third, [PRIORITY 3].

[PAUSE]

Key updates:
[UPDATE 1 - one sentence]
[UPDATE 2 - one sentence]

[PAUSE]

Actions required:
[ACTION 1]
[ACTION 2]

That's your brief for today. Have a productive day.
```

Opportunity Summary Template

```
This is a summary of [OPPORTUNITY NAME].

[PAUSE]

The opportunity:
[2-3 sentences describing the opportunity]

[PAUSE]

Key strengths:
[STRENGTH 1]
[STRENGTH 2]
[STRENGTH 3]

[PAUSE]

Key risks:
[RISK 1]
[RISK 2]

[PAUSE]

Current status:
[STATUS SUMMARY]

[PAUSE]

Recommended next steps:
[NEXT STEP 1]
[NEXT STEP 2]

End of summary.
```

Quality Standards

Audio Quality

Criterion	Standard
Clarity	All words clearly audible
Pacing	Natural, not rushed
Pronunciation	Technical terms correct
Length	Appropriate for content
Format	MP3, 128kbps minimum

Content Standards

Criterion	Standard
Accuracy	All facts verified
Completeness	Key points covered
Relevance	Focused on audience needs
Actionability	Clear next steps

Troubleshooting

Issue	Solution
Pronunciation errors	Use phonetic spelling or SSML
Unnatural pacing	Add punctuation and pauses
Wrong tone	Adjust stability/style settings
Audio too long	Edit script for conciseness
Audio too short	Add context or detail

Future Integration

When The Brain platform is fully integrated:

1. **Automated generation** - Voice briefings generated automatically from text summaries
2. **Scheduled delivery** - Daily briefs sent at configured times
3. **On-demand access** - Generate voice summary of any document
4. **Multi-language** - Support for multiple languages
