CEPHO-BP-014: Data Room Document Management Process

Document ID: CEPHO-BP-014
Version: 1.0
Classification: INTERNAL - CONFIDENTIAL
Created: January 16, 2026
Author: Manus AI
Status: ACTIVE

---

1. Purpose and Scope

This document establishes the secure protocols for handling documents obtained from third-party data rooms during due diligence processes. It ensures compliance with data room terms of service, protects business relationships, and maintains the integrity of the due diligence process while maximizing the analytical capabilities of CEPHO.

Critical Principle: CEPHO (Manus AI) will **never** directly access third-party data rooms. All document intake occurs through user-provided materials only.

---

2. Security Mandate

2.1 Prohibited Activities

The following activities are **strictly prohibited** and will not be performed under any circumstances:

Prohibited Activity	Risk Level	Consequence
Automated login to third-party data rooms	CRITICAL	NDA breach, deal termination, legal liability
Scraping or bulk downloading from data rooms	CRITICAL	Detection by audit systems, reputation damage
Using credentials to access data rooms on user's behalf	CRITICAL	Terms of service violation, potential fraud
Simulating human behavior to mask automated access	CRITICAL	Deceptive practice, contractual breach
Storing data room login credentials	HIGH	Security vulnerability, compliance violation

2.2 Rationale

Professional data rooms (iDeals, Intralinks, Datasite, Firmex, Merrill DatasiteOne, etc.) employ sophisticated monitoring systems that capture:

- **User identification:** Email, IP address, device fingerprint, browser signature
- **Temporal patterns:** Exact timestamps, session duration, inter-document timing
- **Behavioral analytics:** Reading time per page, scroll patterns, download sequences
- **Anomaly detection:** Machine-speed access, uniform timing, bulk operations

Automated access, even when throttled, produces detectable patterns that differ fundamentally from human behavior. Detection risks include:

1. **Immediate deal termination** by the selling party
2. **Reputation damage** affecting future deal flow
3. **Legal exposure** from NDA and terms of service violations
4. **Regulatory scrutiny** in regulated industries (financial services, healthcare)

---

3. Approved Document Intake Methods

3.1 Method Overview

Intake Method	Use Case	Processing Capability	Recommended For
Downloaded Documents	Full document access permitted	Full text extraction, analysis	Financial models, contracts, reports
Screenshots	Quick capture, restricted download	OCR extraction, visual analysis	Key pages, summary tables
Photos (Mobile)	On-the-go capture	OCR extraction, visual analysis	Meeting materials, physical documents
Screen Recordings	Process documentation	Frame extraction, transcription	Walkthroughs, presentations
Copy-Paste Text	Text-only extraction	Direct text analysis	Specific sections, data tables

3.2 Method 1: Downloaded Documents

When to Use: When the data room permits document downloads and you have explicit permission.

Process:

1. Access the data room using your authorized credentials
2. Download permitted documents to your local device
3. Organize downloads by category (Financial, Legal, Operational, Commercial)
4. Upload to CEPHO via secure file transfer
5. CEPHO processes and extracts information

Supported Formats:

- PDF (preferred for contracts, reports)
- Excel/CSV (financial models, data tables)

- Word/DOCX (narrative documents)
- PowerPoint/PPTX (presentations)
- Images (JPG, PNG for embedded visuals)

Naming Convention:

```
[DataRoom]_[Category]_[DocumentName]_[Date].ext
Example: iDeals_Financial_AuditedAccounts_2025.pdf
```

3.3 Method 2: Screenshots

When to Use: When downloads are restricted but screen capture is permitted, or for quick capture of specific pages.

Process:

1. Navigate to the relevant document/page in the data room
2. Capture screenshot using system tools (Cmd+Shift+4 on Mac, Win+Shift+S on Windows)
3. Save with descriptive filename
4. Upload to CEPHO for OCR processing

Best Practices:

- Capture at highest resolution available
- Ensure full page is visible (zoom out if necessary)
- Include document title/header in capture for context
- Capture multiple pages sequentially with numbered filenames

Naming Convention:

```
[DataRoom]_[DocumentName]_Page[XX]_[Date].png
Example: iDeals_ShareholderAgreement_Page01_20260116.png
```

3.4 Method 3: Mobile Photos

When to Use: When accessing physical documents or when in meetings where digital capture isn't available.

Process:

1. Ensure adequate lighting (natural light preferred)
2. Position camera directly above document (avoid angles)
3. Ensure all text is in focus and readable
4. Capture full page in single frame where possible
5. Transfer photos to CEPHO for processing

Quality Guidelines:

- Minimum resolution: 12MP
- Avoid shadows across text
- Include document edges for context
- Use document scanner apps (CamScanner, Adobe Scan) for enhanced quality

3.5 Method 4: Copy-Paste Text

When to Use: For specific sections, data tables, or when only text content is needed.

Process:

1. Select the relevant text in the data room viewer
2. Copy to clipboard
3. Paste into a text file or directly into CEPHO chat
4. Include source reference (document name, page number)

Format Template:

```
SOURCE: [Document Name], Page [X]
DATA ROOM: [Platform Name]
DATE CAPTURED: [YYYY-MM-DD]
---
[Pasted Content]
```

---

4. Document Classification System

4.1 Classification Categories

All documents processed through CEPHO are classified into two primary categories:

Classification	Definition	Handling Protocol
AMPORA INTERNAL	Documents created by or for AMPORA	May be reformatted, branded, enhanced
EXTERNAL - AS-IS	Third-party documents (contracts, LOIs, MOUs, target company materials)	Must remain in original format, no modifications

4.2 AMPORA Internal Documents

Documents that can be reformatted with AMPORA branding:

- Analysis reports created by CEPHO
- Summary documents and executive briefings
- Checklists and tracking documents
- Presentation materials for internal use
- Gap analyses and recommendations
- Project status reports

Branding Elements:

- AMPORA logo in header
- Consistent typography (as per brand guidelines)

- Standard color palette
- Document ID and version control

4.3 External Documents (AS-IS)

Documents that must remain in original format:

- Contracts and legal agreements
- Letters of Intent (LOIs)
- Memoranda of Understanding (MOUs)
- Financial statements (audited)
- Regulatory filings and licenses
- Third-party reports (valuations, technical assessments)
- Target company presentations
- Correspondence from counterparties

Handling Rules:

- No reformatting or modification
- Store in original file format
- Reference by original filename
- Track version if multiple versions received
- Note any redactions or watermarks present

---

5. RAG Status Tracker

5.1 Document Processing Status

Each document received is tracked through a RAG (Red-Amber-Green) status system:

Status	Color	Definition	Action Required
RECEIVED	⬜ White	Document uploaded to CEPHO	Awaiting processing
PROCESSING	🟡 Amber	OCR/extraction in progress	Monitor completion
EXTRACTED	🟢 Green	Key information extracted	Ready for analysis
FLAGGED	🔴 Red	Issues identified (quality, missing pages, unclear)	User review required
ANALYZED	🟢 Green	Full analysis complete	Ready for reporting
ARCHIVED	⬜ White	Processing complete, stored	No action

5.2 Document Tracking Template

```
## Data Room Document Tracker

| Doc ID | Document Name | Source | Classification | Status | Key Findings |
Notes |
|--------|---------------|--------|----------------|--------|--------------
|-------|
| DR-001 | Audited Accounts 2024 | iDeals | EXTERNAL | 🟢 EXTRACTED |
Revenue €12.4M | Complete |
| DR-002 | SHA Draft v3 | iDeals | EXTERNAL | 🟡 PROCESSING | - | Legal
review pending |
| DR-003 | Management Presentation | iDeals | EXTERNAL | 🔴 FLAGGED | - |
Pages 12-15 missing |
| DR-004 | Gap Analysis | AMPORA | INTERNAL | 🟢 ANALYZED | 8 critical gaps
| Report ready |
```

5.3 Quality Flags

Documents may be flagged for the following reasons:

Flag Code	Description	Resolution
QUAL-001	Image quality too low for OCR	Re-capture at higher resolution
QUAL-002	Pages missing or out of order	Verify against data room index
QUAL-003	Text partially obscured	Re-capture or note limitation
QUAL-004	Watermark interfering with text	Note in analysis, proceed with caution
QUAL-005	Password protected	Obtain password or request unlocked version
QUAL-006	Corrupted file	Re-download from source

---

6. Signature Verification Protocol

6.1 Purpose

For legal documents (contracts, LOIs, MOUs), CEPHO will verify signature status but will not modify or authenticate signatures.

6.2 Verification Checklist

Check	Status	Notes
Signature block present	☐ Yes / ☐ No	
All parties signed	☐ Yes / ☐ No / ☐ Partial	List unsigned parties
Dates present	☐ Yes / ☐ No	
Witness signatures (if required)	☐ Yes / ☐ No / ☐ N/A	
Notarization (if required)	☐ Yes / ☐ No / ☐ N/A	
Digital signature valid	☐ Yes / ☐ No / ☐ N/A	Note platform (DocuSign, etc.)

6.3 Signature Status Categories

Status	Definition
FULLY EXECUTED	All required signatures present and dated
PARTIALLY EXECUTED	Some signatures missing
UNSIGNED	No signatures present (draft)
SIGNATURE PENDING	Sent for signature, awaiting return
SIGNATURE DISPUTED	Questions about validity

---

7. Integration with Due Diligence Process

7.1 Workflow Integration

This document management process integrates with **CEPHO-BP-012: Due Diligence Process Guide** as follows:

```
┌──────────────────────────────────────────────────────────────────────┐
│                      DUE DILIGENCE WORKFLOW                          │
├──────────────────────────────────────────────────────────────────────┤
│                                                                      │
│  1. USER accesses third-party data room                              │
│           ↓                                                          │
│  2. USER downloads/captures documents per approved methods           │
│           ↓                                                          │
│  3. USER uploads to CEPHO with source metadata                       │
│           ↓                                                          │
│  4. CEPHO classifies (AMPORA INTERNAL vs EXTERNAL AS-IS)             │
│           ↓                                                          │
│  5. CEPHO processes and extracts key information                     │
│           ↓                                                          │
│  6. CEPHO updates RAG tracker with status                            │
│           ↓                                                          │
│  7. CEPHO generates analysis reports (AMPORA branded)                │
│           ↓                                                          │
│  8. USER reviews and approves findings                               │
│           ↓                                                          │
│  9. CEPHO archives documents with full audit trail                   │
│                                                                      │
└──────────────────────────────────────────────────────────────────────┘
```

7.2 Information Extraction Capabilities

For each document type, CEPHO can extract and analyze:

Document Type	Extraction Capabilities
Financial Statements	Revenue, EBITDA, margins, trends, anomalies, working capital
Contracts	Key terms, obligations, termination clauses, change of control provisions
Cap Tables	Ownership structure, dilution scenarios, preference stacks
Technical Documents	Architecture, dependencies, technical debt, scalability
HR/Organizational	Headcount, key person dependencies, compensation structures
Legal/Regulatory	Compliance status, pending litigation, regulatory requirements
Commercial	Customer concentration, pipeline, churn rates, pricing

---

8. Security and Confidentiality

8.1 Data Handling Principles

1. **Minimum Necessary Access:** Only process documents required for the specific due diligence scope
2. **Secure Transmission:** All uploads via encrypted channels
3. **No Persistent Storage of Credentials:** Never store data room login details
4. **Audit Trail:** Maintain log of all documents processed with timestamps
5. **Need-to-Know Basis:** Limit access to analysis outputs to authorized parties

8.2 Confidentiality Reminders

Before processing any data room documents, confirm:

- [ ] NDA is in place with the target company
- [ ] Data room terms of service permit the intended use
- [ ] User has explicit authorization to access the data room
- [ ] Documents are being used solely for the stated due diligence purpose

- [ ] No documents will be shared outside the authorized deal team

---

9. Document Request Template

When requesting documents from the user for processing, use this template:

```
## Document Request for [Deal Name] Due Diligence

**Data Room Platform:** [iDeals/Intralinks/Other]
**Request Date:** [YYYY-MM-DD]
**Priority:** [High/Medium/Low]

### Documents Requested

| # | Document Name | Category | Format Preferred | Notes |
|---|---------------|----------|------------------|-------|
| 1 | Audited Financial Statements (3 years) | Financial | PDF | Include
notes |
| 2 | Management Accounts (YTD) | Financial | Excel | Monthly breakdown |
| 3 | Shareholder Agreement | Legal | PDF | Latest executed version |
| 4 | Customer Contracts (Top 10) | Commercial | PDF | Redacted acceptable |
| 5 | Organization Chart | HR | PDF/Image | Current structure |

### Capture Instructions

Please use the following methods as appropriate:
- **Downloads:** For documents where download is permitted
- **Screenshots:** For restricted documents (capture full pages)
- **Photos:** For physical documents only

### Naming Convention

Please name files as:
`[Category]_[DocumentName]_[Date].ext`
Example: `Financial_AuditedAccounts2024_20260116.pdf`
```

---

10. Quality Assurance Checklist

Before completing document processing for any due diligence project:

10.1 Completeness Check

- [ ] All requested documents received
- [ ] No pages missing from multi-page documents
- [ ] All document versions clearly labeled
- [ ] Index reconciled against data room contents

10.2 Quality Check

- [ ] All documents readable (OCR successful where applicable)
- [ ] No quality flags unresolved
- [ ] Sensitive information appropriately handled
- [ ] Classification (AMPORA/EXTERNAL) correctly applied

10.3 Analysis Check

- [ ] Key information extracted from all documents
- [ ] Cross-references validated between documents
- [ ] Discrepancies flagged for user review
- [ ] Analysis reports generated in AMPORA format

10.4 Compliance Check

- [ ] No automated data room access occurred
- [ ] All documents obtained through approved methods
- [ ] Audit trail complete and accurate
- [ ] Confidentiality requirements met

---

11. Version History

Version	Date	Author	Changes
1.0	2026-01-16	Manus AI	Initial release
