Gamma Presentation Workflow

Document ID: INT-002
Version: 1.0
Date: January 15, 2026
Purpose: Standard process for creating presentations using Gamma within CEPHO

Overview

Gamma is an AI-powered presentation tool that transforms structured content into professional slide decks. This document defines how Gamma integrates with the CEPHO/Project Genesis workflow.

When to Use Gamma

Use Case	Trigger	Output
Investor Pitch Deck	Business Plan complete	15-20 slide investor presentation
Executive Summary	Deep Dive complete	5-10 slide summary
Progress Report	Status update needed	3-5 slide update
Training Material	New process documented	Variable length training deck

---

Workflow Process

Step 1: Prepare Content

Before using Gamma, prepare structured content in Markdown format:

1. Create slide content outline in `/home/ubuntu/the-brain/[PROJECT]_SLIDE_CONTENT.md`
2. Follow the standard structure:
    - Title slide
    - Problem/Opportunity
    - Solution
    - Market
    - Business Model
    - Traction/Validation
    - Team
    - Financials
    - Ask
    - Appendix
3. Ensure each slide has:
    - Clear headline (insight, not topic label)
    - 3-5 supporting points
    - Data or evidence where applicable

Step 2: Access Gamma

1. Navigate to gamma.app
2. Log in with CEPHO credentials
3. Select "Create new" → "Paste in text"

Step 3: Input Content

1. Copy the prepared Markdown content
2. Paste into Gamma's text input
3. Select presentation style:
    - **Investor Deck:** Professional, data-focused

- **Executive Summary:** Clean, minimal
- **Training:** Instructional, step-by-step

Step 4: Customize Design

1. Select theme matching CEPHO brand:
    - Colors: Black, white, grey (per brand guidelines)
    - Fonts: Professional, readable
    - Layout: Clean, not cluttered
2. Review each slide for:
    - Readability
    - Visual balance
    - Data accuracy

Step 5: Export and Store

1. Export as:
    - PDF (for sharing)
    - PowerPoint (for editing)
    - Link (for live presentation)
2. Save to:
    - `/home/ubuntu/the-brain/offline_package/04_CASE_STUDIES/[PROJECT]/`
    - Name: `[PROJECT]_INVESTOR_DECK_V[X].pdf`

Step 6: Quality Check

Before delivery, verify:

Check	Criteria	Pass/Fail
Branding	Colors and fonts match guidelines	
Content	All key points included	
Data	Numbers accurate and sourced	
Flow	Logical narrative progression	
Length	Appropriate for audience	
Readability	Text visible, not cluttered	

Integration with Project Genesis

Quality Standards

Slide Design Principles

1. **One idea per slide** - Don't overcrowd
2. **Headlines as insights** - "Revenue grew 40%" not "Revenue"
3. **Visual hierarchy** - Most important information prominent

4. **Consistent formatting** - Same fonts, colors throughout
5. **Data visualization** - Charts over tables where possible

Content Standards

1. **Evidence-based claims** - Support assertions with data
2. **Clear narrative** - Story flows logically
3. **Audience-appropriate** - Adjust depth for audience
4. **Honest representation** - No misleading statistics

Troubleshooting

Issue	Solution
Gamma not parsing content correctly	Simplify Markdown, use clear headers
Design doesn’t match brand	Manually adjust colors and fonts
Too many slides generated	Consolidate content before input
Images not appropriate	Replace with custom images or remove
