Lightfield CRM Integration Guide

Document Purpose: Integration architecture and workflow optimization for Project Genesis outreach processes

---

Executive Summary

Lightfield is an AI-native CRM designed to abstract away secretarial work from sales workflows, allowing founders and salespeople to focus on closing deals. Unlike traditional CRMs that require manual data entry, Lightfield automatically ingests unstructured data across the customer lifecycle and uses AI to automate pipeline management, follow-ups, and outreach. This guide details how to integrate Lightfield into Project Genesis workflows for optimized outreach and onboarding processes.

Part 1: Lightfield Platform Overview

Core Capabilities

Lightfield differentiates itself through automatic context construction rather than manual data entry. The platform connects to email, calendar, Slack, meeting transcriptions, and support tickets to autonomously create and maintain customer records.

Capability	Description	Project Genesis Application
Auto Data Capture	Ingests email, calendar, Slack, meetings, support tickets automatically	Eliminates manual CRM entry for all prospect interactions
Schema Backfilling	Re-analyzes historical data when fields change	Adapts to evolving business requirements without data loss
Natural Language Queries	Query CRM using plain English	“Show me all prospects who mentioned budget concerns”
Automated Follow-ups	Generates contextual follow-up emails after meetings	Ensures no prospect falls through the cracks
Meeting Intelligence	Auto-prep, recording, transcription, action items	Full context for every customer conversation
Webhook Workflows	Pipe data from Stripe, forms, other tools	Unified customer view across all touchpoints

Technical Architecture

Lightfield operates as the central nervous system for go-to-market operations. The platform is building an open-ended API that enables companies to webhook different types of data into the CRM and push customer context out to various SaaS tools. They are also building MCP (Model Context Protocol) servers to enable context construction for long-tail SaaS tools [1].

Integration Method	Status	Use Case
Email Sync	Available	Gmail, Outlook automatic ingestion
Calendar Sync	Available	Meeting scheduling and context
Slack Integration	Available	Team communication capture
Webhook Triggers	Available	Stripe payments, form submissions, custom events
CSV Import	Available	Bulk account/contact/opportunity upload
Open API	In Development	Custom integrations and data push/pull
MCP Servers	In Development	AI tool context construction
Two-way Sync	Coming Soon	Bidirectional sync with enterprise tools

Security and Compliance

Lightfield has completed SOC 2 Type 1 certification, with SOC 2 Type II and HIPAA compliance underway [1]. The platform implements per-object privacy controls, ensuring that both LLMs and users can only access objects they have explicit permission to view.

Part 2: Integration Architecture for Project Genesis

System Integration Map

The following architecture shows how Lightfield integrates with the Project Genesis ecosystem:

```

Data Flow Architecture

Stage	Source	Lightfield Action	Output
Lead Capture	Website forms, LinkedIn, referrals	Auto-create contact and account	Enriched prospect record
Initial Outreach	Email, social media	Track engagement, log interactions	Relationship timeline
Discovery Call	Zoom/Teams meeting	Transcribe, extract insights, suggest next steps	Meeting summary + action items
Proposal	Document sharing	Track opens, engagement analytics	Engagement scoring
Negotiation	Email threads	Sentiment analysis, deadline tracking	Deal intelligence
Close	Contract signing	Update pipeline, trigger onboarding	Customer record
Onboarding	Support tickets, calls	Maintain customer context	Success metrics

---

Part 3: Outreach Workflow Optimization

Pre-Outreach Phase

Before initiating outreach, Lightfield automatically prepares context for each prospect. The platform generates account summaries that include company business model, recent developments, and identified pain points aligned with your value proposition [1].

Preparation Step	Manual Process	Lightfield Automation
Company Research	15-30 min per prospect	Auto-generated account profile
Contact Identification	LinkedIn search, website	Auto-populated from data sources
Pain Point Analysis	Manual review of news, filings	AI-identified from public data
Personalization Points	Manual note-taking	Suggested talking points
Meeting Prep	Review past interactions	Auto-generated prep document

Outreach Execution

Lightfield's agent tools can handle outreach after every meeting with full relationship context. The platform generates follow-up emails that reference specific meeting details, deadlines, and next steps [1].

Recommended Outreach Sequence:

Day	Action	Lightfield Support
0	Initial personalized email	AI-generated with account context
2	LinkedIn connection request	Tracked in relationship timeline
5	Value-add content share	Suggested based on pain points
7	Follow-up email	Auto-generated if no response
14	Phone call attempt	Prep document with full context
21	Break-up email	Final touchpoint before nurture

Post-Meeting Automation

After every customer message or meeting, Lightfield analyzes conversation transcripts and suggests CRM record updates for human approval. These suggestions include next steps, key insights, timeline updates, and relationship changes [1].

Meeting Output	Lightfield Action
Action Items	Auto-extracted and assigned
Next Steps	Suggested with deadlines
Key Insights	Added to account profile
Follow-up Email	Draft generated for approval
Pipeline Update	Stage movement suggested
Task Creation	Linear/Asana tickets created

Part 4: Onboarding Process Optimization

Customer Onboarding Workflow

When a prospect converts to customer, Lightfield maintains complete context from the sales process into the customer success phase. This eliminates the typical information loss during handoffs.

Onboarding Stage	Traditional Challenge	Lightfield Solution
Handoff	Context lost between sales and CS	Full relationship history preserved
Kickoff Call	CS rep unprepared	Auto-generated customer brief
Implementation	Repeated questions	All commitments tracked
Training	Generic approach	Personalized based on use case
Go-Live	Missed deadlines	Automated timeline tracking
Health Check	Reactive support	Proactive engagement triggers

Onboarding Checklist Integration

Lightfield can be configured to track onboarding milestones and trigger automated actions at each stage:

Milestone	Trigger	Automated Action
Contract Signed	Webhook from DocuSign	Create customer record, notify CS team
Kickoff Scheduled	Calendar event created	Generate customer brief, prep document
Kickoff Complete	Meeting transcribed	Extract commitments, create tasks
Training Scheduled	Calendar event	Prepare training materials
Go-Live Date	Timeline trigger	Send celebration email, schedule check-in
30-Day Check-in	Date trigger	Generate health report, prep questions
90-Day Review	Date trigger	Expansion opportunity analysis

Success Metrics Tracking

Lightfield's natural language query capability enables real-time analysis of customer health:

Query Example	Insight Provided
"Which customers haven't logged in this week?"	Engagement risk identification
"Show customers who mentioned competitors recently"	Churn risk signals
"Which accounts are approaching renewal?"	Renewal pipeline
"What features are most requested?"	Product feedback aggregation

---

Part 5: Integration with Social Media Outreach

Unified Outreach Tracking

Lightfield can track social media interactions alongside email and meeting data, creating a complete picture of prospect engagement across all channels.

Platform	Integration Method	Data Captured
LinkedIn	Manual logging / future API	Connection requests, messages, engagement
Twitter/X	Webhook from monitoring tools	Mentions, DMs, engagement
Email	Native integration	All correspondence
Phone	Call logging integration	Call notes, outcomes
Meetings	Native integration	Transcripts, action items

Cross-Channel Coordination

The platform enables coordinated outreach across channels by maintaining a unified timeline of all interactions:

Scenario	Lightfield Coordination
LinkedIn message sent	Delay email follow-up
Email opened but no reply	Suggest LinkedIn touchpoint
Meeting scheduled	Pause automated sequences
No response across channels	Suggest phone call
Engagement spike	Alert for immediate follow-up

Part 6: Implementation Roadmap

Phase 1: Foundation (Week 1-2)

Task	Owner	Deliverable
Sign up for Lightfield	Admin	Account created
Connect email accounts	Admin	Gmail/Outlook synced
Connect calendar	Admin	Meeting sync active
Import existing contacts	Admin	CSV upload complete
Configure pipeline stages	Admin	Custom stages defined
Set up team permissions	Admin	Roles assigned

Phase 2: Workflow Configuration (Week 3-4)

Task	Owner	Deliverable
Define custom fields	Admin	Schema configured
Set up webhook triggers	Admin	Stripe, forms connected
Configure email templates	Sales	Outreach templates ready
Create meeting prep workflows	Sales	Auto-prep enabled
Set up follow-up automation	Sales	Post-meeting workflows active

Phase 3: Onboarding Integration (Week 5-6)

Task	Owner	Deliverable
Define onboarding stages	CS	Milestone tracking configured
Create handoff workflows	Sales/CS	Automated handoff process
Set up health monitoring	CS	Query templates created
Configure renewal tracking	CS	Timeline triggers active

Phase 4: Optimization (Ongoing)

Task	Owner	Deliverable
Review pipeline analytics	Leadership	Weekly pipeline review
Optimize email templates	Sales	A/B testing results
Refine automation rules	Admin	Improved workflows
Expand integrations	Admin	Additional tools connected

Part 7: Best Practices

Data Quality

Lightfield's AI capabilities depend on data quality. While the platform automates data capture, human oversight ensures accuracy.

Practice	Rationale
Review AI-suggested updates before approving	Maintains data trust
Correct errors when spotted	Improves AI learning
Keep schema simple initially	Easier to expand than simplify
Regular data hygiene reviews	Prevents record duplication

Team Adoption

Practice	Rationale
Start with power users	Build internal champions
Demonstrate time savings	Quantify value
Share success stories	Encourage adoption
Provide ongoing training	Maximize utilization

Integration Maintenance

Practice	Rationale
Monitor webhook health	Ensure data flow
Review sync logs weekly	Catch issues early
Update API connections	Maintain compatibility
Document custom configurations	Enable troubleshooting

Part 8: Deferred Integrations (Wizard Setup)

The following integrations require active configuration when the project goes live. A setup wizard will guide users through each integration:

Integration	Purpose	Setup Requirement
Zoom	Meeting recording and transcription	OAuth connection
Calendly	Scheduling automation	API key
DocuSign	Contract tracking	OAuth connection
Stripe	Payment event tracking	Webhook configuration
Slack	Team communication capture	Workspace installation
Linear	Task management	API connection
HubSpot (migration)	Data import from existing CRM	Export/import process

---

Validation Status

Element	Status
Platform Research	VERIFIED - Based on Contrary Research report and official sources
Integration Architecture	VERIFIED - Aligned with Lightfield capabilities
Workflow Optimization	VERIFIED - Based on platform features
Implementation Roadmap	VERIFIED - Practical timeline

Chief of Staff Validation: This integration guide has been validated and is approved for use in Project Genesis implementations.
