UX Review Findings - Onboarding Flow

Issues Identified:

1. Achievement Toast ("Streak Started!") - TOP PRIORITY

- Appears immediately on first visit before user has done anything meaningful
- Clutters the onboarding experience
- Gamification should come AFTER user engagement, not before
- **Action:** Remove from initial load, trigger only after meaningful activity

2. Multiple Overlapping Modals

- Onboarding wizard modal
- Mood check-in modal
- Achievement toast
- All competing for attention simultaneously
- **Action:** Sequence these properly - one at a time

3. Mood Check-in Timing

- Appears during onboarding before user understands the app
- Should come after user has completed basic setup
- **Action:** Move to post-onboarding or make it optional during intro

4. Getting Started Checklist

- Good concept but appears alongside other overlays
- Gets lost in the visual noise
- **Action:** Make this the PRIMARY focus after onboarding wizard completes

5. Onboarding Wizard (6 steps)

- Core content is good
- But competes with other UI elements
- **Action:** Ensure it's the ONLY overlay during initial experience

Recommended Flow:

1. Onboarding Wizard (clean, focused, 6 steps)
2. Getting Started Checklist (after wizard)
3. Mood Check-in (optional, after first task completion)
4. Gamification/Streaks (only after meaningful engagement)

Elements to Remove/Defer:

- [ ] Achievement toast on first load
- [ ] Auto-triggering mood check during onboarding
- [ ] Multiple simultaneous overlays
